

Machine regulator

A machine reglator is a technician who carries out technical tuning on machines, in line with the production plan. They are responsible for preparing the machines for the machine operators, and for adjusting and reparing basic issues.

A machine regulator has a developed technical sens, knows the basis of mecanics, is autonomous and has the sens of security. They also need to be organised so they can tune the machines to maximise productivity. Lastly, a machine regulator has extended knowledge of industrial processes and machines.

A team leader manages one or several teams or production cells to guarantee the production they are responsible for. A team leader needs to meet the productivity goals, observe deadlines of quality and security, all while maintaining a good work environment.

The team leader is pragamtic, has good send of organisation an dpriorities, and is a good manager. They need to be autonomous, aware of security risks, and has extended knowledge of industrial processes and machines.

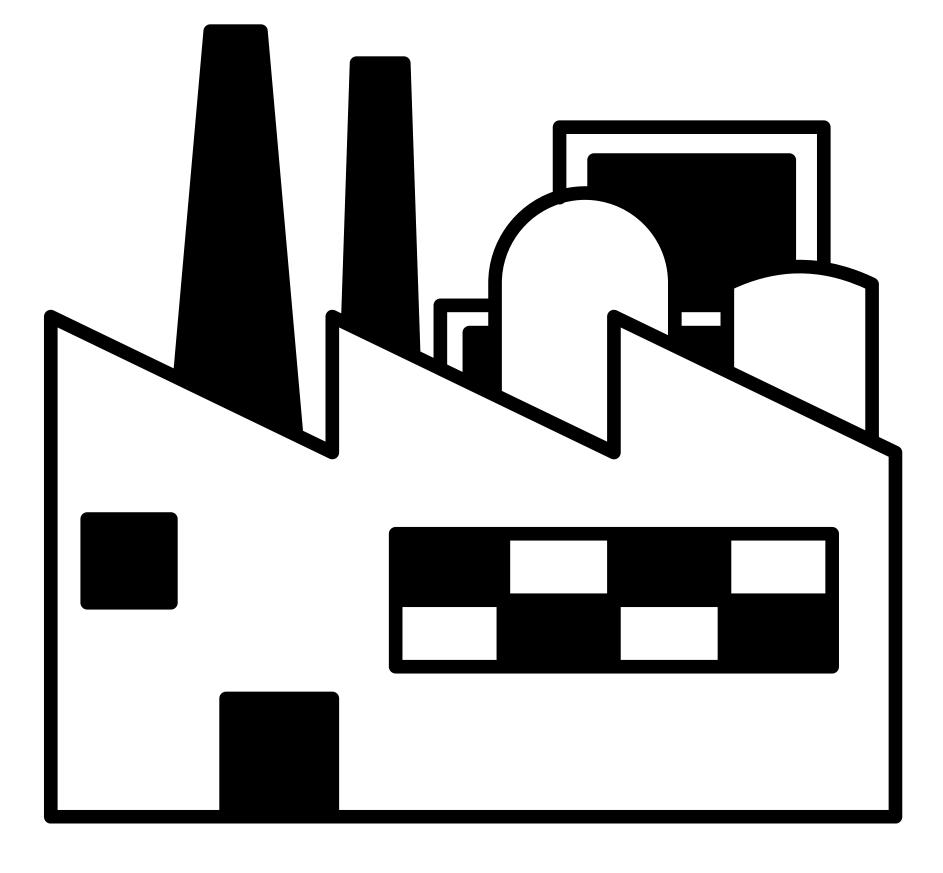

Team leader

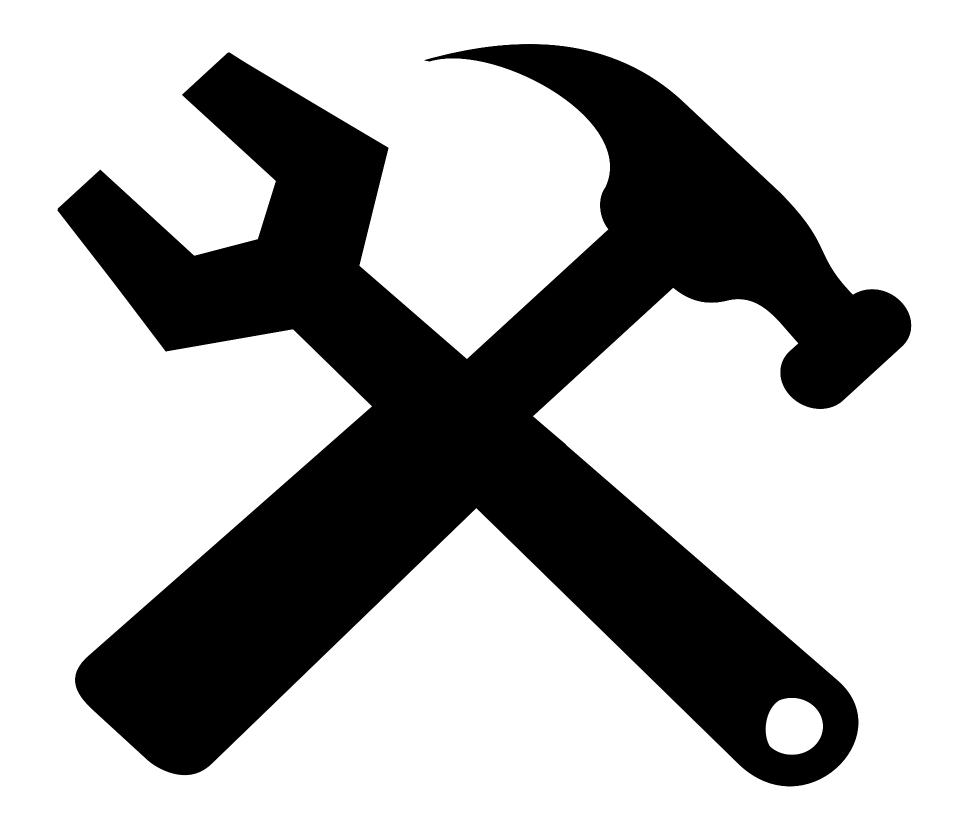

Line conductor

A line conductor is responsible of piloting a machine, a group of machines, or a production line. They carry out the production plan for the machine in line with indications given by their management.

A line conductor must have a good technical capacity, as well as being aware of security risks. In addition, they need to be efficient and rigorous, a fast performer, as well as meticulous.

Machine operator

A machine operator is responsible of carrying out the necessary operations (manually or on a machine) to manufacture products in line with the production plan. They can also carry out some basic maintenance on machines.

A machine operator must have a technical sens and must be a fasst performer. They aslo need to be attentive and conscientious, and must be aware of security risks.
